

INTEGRATION SOLUTION OVERVIEW

Spillman Computer-Aided Dispatch

HigherGround® and Spillman

Spillman Technologies (Motorola Solutions Company) is a leading provider of public safety software products, training, support, and services. Spillman's Computer-Aided Dispatch (CAD) module integrates with HigherGround's public safety recording and evaluation tools.

This interface enhances the logging and reporting capabilities of Public Safety Answering Points (PSAPs) that partner with both Spillman Technologies and HigherGround, Inc., connecting users with the critical call information they need for review and distribution. The interface sends call identification markers from an agency's Spillman system to HigherGround's Capture911 recording application, allowing personnel to quickly record call logs, recorded called files, caller ID, and timestamps. Users will be able to access recorded calls, as well as critical dispatch information like synchronized timestamps and incident ID numbers from within recorded 9-1-1 calls and the CAD station information.

About HigherGround

HigherGround provides reliable, user-friendly, and economical recording solutions for performance monitoring and incident reconstruction in critical communications. Our full-featured, multi-channel solutions transform data into actionable intelligence, enabling decisions with certainty to optimize operations, enhance telecommunicator performance, and reduce costs. HigherGround partners and/or integrates with leading edge technology vendors to bring our clients best-in-class solutions.

About Spillman

Spillman Technologies is a Motorola company that specializes in integrated software solutions, including Computer Aided Dispatch, Records Management Systems, Mobile Data & Field Reporting, Mapping & GIS, Jail Management Systems, Fire, Data Sharing, Personnel & Resources, and Analytics & Intelligence-Led Policing.
